

coliform bacteria – as close to zero as possible □
aluminum – 16,000 ug/L
□bis(2-ethylhexyl) phthalate (DEHP) □- 7 ug/L
arsenic – 4 ug/L
□ethylene glycol – 8,000 ug/L*
lithium □
2-methoxyethanol (Ethylene glycol monomethyl ether) □- 78 ug/L
manganese – 320 ug/L
□methane – 28,000 ug/L □
sodium □- 20,000 ug/L
2,2'oxybisethanol (diethylene glycol) – 8,000 ug/L*
□iron – 11,000 ug/L
□triethylene glycol – 8,000 ug/L*

*This value is based on ATSDR's recommendation of a screening level of 8,000 ug/L for glycol exposure in young children.
